

What's in a tune-up?

1. We lightly clean each bike,
2. inspect and adjust shifting & braking components (calipers, pads, derailleurs, levers),
3. true the wheels and inflate tires,
4. re-grease bearings and adjust the bottom bracket, headset, and hubs as necessary, and
5. clean + re-lube the drive train

*We'll do this for (almost) any bike in (almost) any condition. If your ride needs extra attention, or additional parts replaced, we will always let you know beforehand.
